
Education

B.S. in Computer Science at **Communication University of China**, Beijing, China

Sep, 2023 – Jun, 2027

Minor in Mathematics, GPA 3.72/4.00

Selected courses: Advanced Calculus, Probability and Statistics, Linear Algebra, Web Frontend Development, Computer Networks, Computer Organization

Skills

- Familiar with HTML5, CSS3, and JavaScript, and have experience with TypeScript.
 - Experience with CSS preprocessors like Sass/Less and popular CSS frameworks such as Tailwind CSS or Material-UI.
 - Familiar with React, Redux (including Redux Toolkit), React Router, and state management solutions.
 - Familiar with build tools like Vite, Webpack, and package managers such as npm or pnpm.
 - Familiar with front-end testing tools like Jest/Vitest, and proficient in using browser developer tools for debugging and performance optimization.
 - Understand the basics of computer networks, including the HTTP/HTTPS protocols, RESTful APIs, TCP connections, and DNS resolution.
 - Proficient in using Git for version control and collaborating on projects through platforms like GitHub/GitLab.
 - CET-4 score of 539 and CET-6 score of 561. Regularly read English books and can proficiently read English documents and materials.
-

Related Projects

Personal Blog System

 <https://liuhongwei.org>,  [Liu-Hong-Wei/Blog](#)

- Developed a modern, responsive Single Page Application (SPA) frontend for a personal blog using React, TypeScript, and Vite.
- Implemented a component-based architecture with features like post lists, detailed post views, and author profiles.
- Integrated with a Django REST backend to fetch and display blog content, including posts, tags, and user information.
- Implemented client-side rendering of Markdown to HTML, with syntax highlighting for code blocks.
- Enhanced user experience with features like dark mode, lazy loading for images and components, and client-side caching strategies using custom hooks (`useLocalStorage`, `useLazyLoading`).
- Planned and designed advanced features including full-text search, internationalization (i18n) for multi-language support, and a customizable theming engine.
- Architected for scalability and performance, with plans for Progressive Web App (PWA) capabilities for offline access and optimized bundle splitting for faster load times.
- Envisioned an interactive content experience with support for embedded elements like LaTeX for mathematical notations and Mermaid for diagrams.

SmartStay - Hotel Management System

 [Liu-Hong-Wei/SmartStay-System](#)

- A comprehensive internal management system for a boutique hotel, featuring modules for bookings, cabins, guest check-in/check-out, and user authentication.
- Developed a dynamic dashboard with statistical charts to visualize key business metrics like occupancy rates, sales, and recent activities.
- Implemented full CRUD (Create, Read, Update, Delete) functionalities for managing hotel cabins and customer bookings.
- Engineered advanced data handling features including server-side filtering, sorting, and pagination for efficient data management.
- Built with a modern frontend stack: React, React Query for asynchronous state management, Styled-components for styling, and React Router for navigation.
- Integrated with Supabase for backend services, handling database operations, user authentication, and data storage.
- Features include dark mode, user profile updates, and a component-based UI architecture for maintainability and scalability.

Awards

- Merit Student
- The Third Prize Scholarship

Motivation

- A highly motivated and passionate individual with a strong interest in frontend development. Eager to learn new technologies and contribute to innovative projects.
- Currently a junior student with a light course load, allowing for flexible working hours that can be adjusted according to company needs.
- Able to work under pressure, with good time management and task prioritization skills.
- In my free time, I enjoy reading tech blogs, experimenting with new frontend frameworks, and contributing to open-source projects.
